INTRODUCTION

28th February is celebrated as National Science Day in India. On this day in 1928, Indian Scientist Sir Chandrasekhara Venkata Raman discovered a phenomenon of scattering of photons, which was later known as 'Raman Effect' after his name. After two years in 1930, he got Nobel Prize' for this remarkable discovery and this was the first Nobel Prize for India In the field of Science. To mark the discovery of his famous phenomenon National Science Day is celebrated in India on the day each year. In 1986, the National Council for Science and Technology Communication (NCSTC) asked the Government of India to designate 28 February as National Science Day which the then Govt. of India accepted and declared the day as National Science Day in 1986. The first National Science Day was celebrated on February 28, 1987.

OBJECTIVE

National science day is celebrated as one of the main science festivals in India every year with following purpose-

- I. To widely spread a message about the significance of scientific applications in the daily life of the people.
- II. To discuss all the issues and implement new technologies for the development of the science
- III. To give an opportunity to the scientific minded citizens in the country
- IV. To encourage the people as well as popularize the Science and Technology
